## I. MDS PLOT

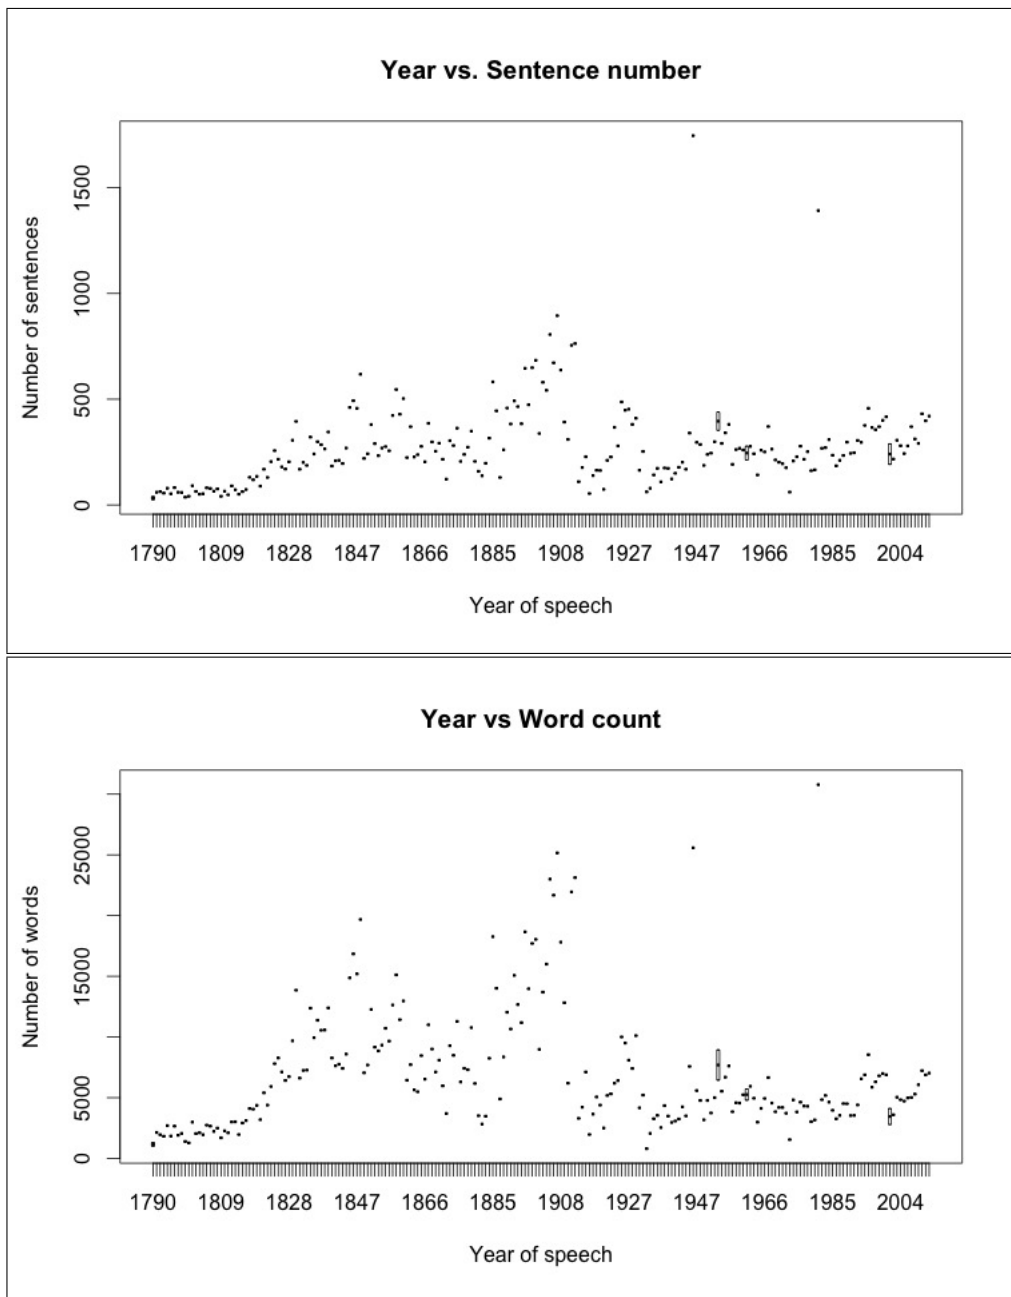

## II. PRESIDENTS PLOT

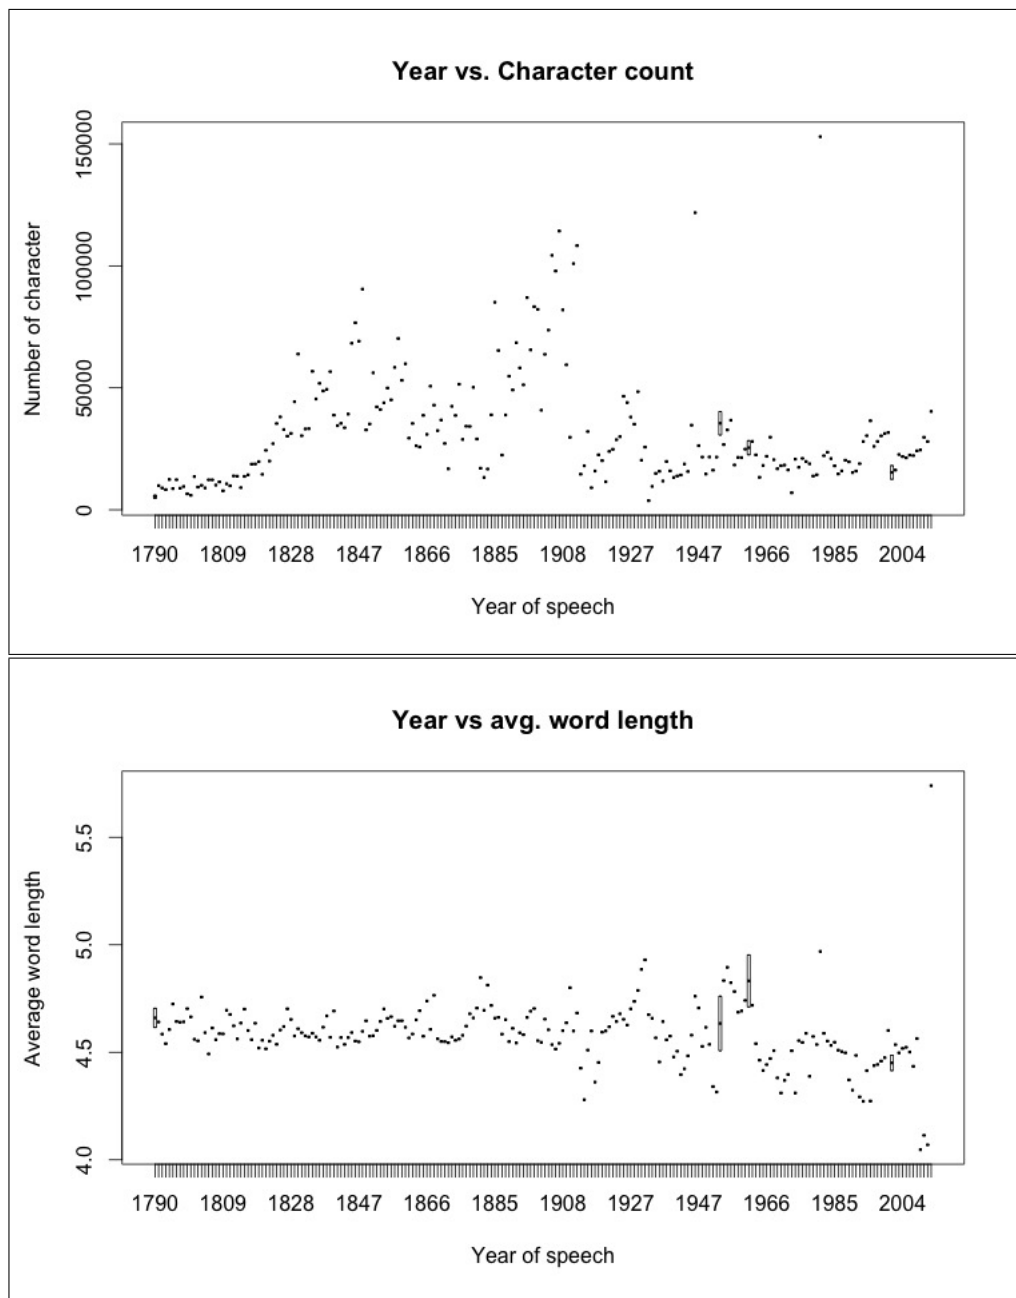

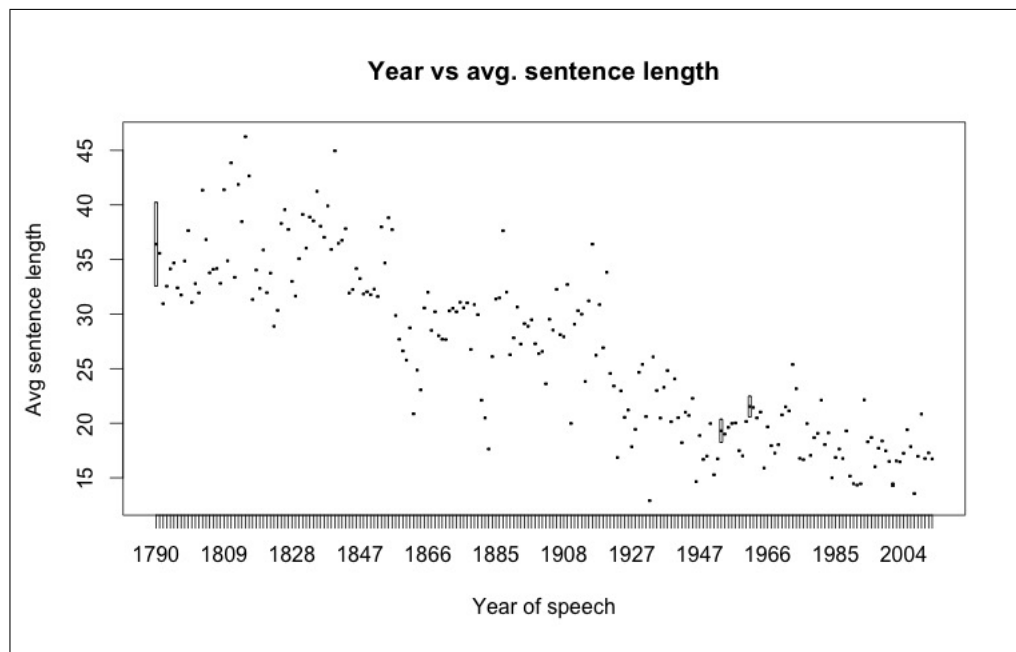

## III. CLUSTER PLOT

## IV. MORE PLOTS

#### V. REMARKS

An interesting behavior on the last plot where we obviously see the significant change in the average sentence length over last two centuries.

On the plot where we examined the number of characters/words/sentences per speech over the period of time we also see interesting trend in the period of 1832-1920 where the number of characters/words/sentences per speech was significantly higher than in the rest of the history. It is interesting that this trend stopped in the period of the Great Depression.
